

POLYUREA PROJECT PROFILE

PROJECT: Commercial boat coating

INDUSTRY: Marine, petrochemical

USE: Anticorrosion

OWNER: Southern Cross

CONTACT: Nukote offices, 8621-5424-9811

SYSTEM: Interior—HT
Exterior—ST base with AL top coat

COATED AREA: 18,000 m²

COMPLETION DATE: 2002 December

INSPECTION RESULTS: Owner is pleased with both appearance and performance

JOB DESCRIPTION: The owner actually had two separate coating needs to protect his investment by extending the boat's useful life.

The primary need was exterior coating. The exterior coating system included a translucent ST base coat with a colored topcoat for both appearance and resistance to the sun's ultraviolet rays. Pool blue was used above the waterline and light blue was used below the waterline.

The interior coating needs were best met using medium gray HT.

Required surface preparation includes abrasive blasting removing all rust and previous coating and the application of a primer (especially in areas where the original coating or rust remains). HT can also be used to enhance adhesion.

This project was applied by Nukote's Indonesian distributor, PT Sandvik.
